```python
a=[]
def add():
   n=int(input("Enter the number of event: "))
   for i in range(0,n):
       event=input("Enter the Events: ")
       a.append(event)
   print(a)

def process():
   a.pop(0)
   print(a)

def display():
   print(a)

def cancel():
   element=input("Enter the event to be canceled: ")
   if element in a:
       a.remove(element)
       print(a)

def main():
   while True:
       print("\n1.Add a Event")
       print("\n2.Process next Event")
       print("\n3.Display pending Event")
       print("\n4.Cancel an Event")
       print("\n5.Exit")

       ch=int(input("Enter your choice: "))

       if ch==1:
           print("\n1.Add a Event: ")
           add()

       elif ch==2:
           print("\n2.Process next Event: ")
           process()
```

```
        elif ch==3:
            print("\n3.Display pending Event: ")
            display()

        elif ch==4:
            print("\n4.Cancel an Event: ")
            cancel()

        elif ch==5:
            print("\n5.Exit")
            quit()

main()
```

Output:

```
 1. Add an Event
 2. Process next Event
 3. Display pending Event
 4. Cancel an Event
 5. Exit

Enter your choice: 1

1.Add an Event:
Enter the number of event: 3
Enter the Events:
Event1
Event2
Event3
['Event1', 'Event2', 'Event3']

Enter your choice: 3
3.Display pending Event:
['Event1', 'Event2', 'Event3']
```
